

AI Internship for Young Achievers

Anushka Bhargava, a student of class XII at Delhi Public School, Mathura Road, Delhi, attended the 2-week on-campus Summer Internship on Artificial Intelligence (AI), at the prestigious National University of Singapore (NUS) from 1st June-15th June, 2024. The program was aimed to enable the participants to dive deeper into the intriguing and ever-evolving concepts of Machine Learning and Artificial Intelligence.

There were seasoned mentors from NUS as well as Amazon Web Services (AWS), assigned to the students who monitored their progress continuously. All the NUS and AWS sessions were followed by Training sessions where students worked on their projects in groups and made presentations to the faculty members.

The internship not only expanded their horizons, but also gave them the wings to foster cooperation and collaboration in a work-oriented sphere. It was an empowering experience for young innovators, which has inspired students to take real world problems and solve them using AI.
